Backflow Management System

OVERVIEW

- The ALLIANCE™ Windows Suite is fully integrated
- Custom interfaces available for 3rd party CIS / Billing System software
- Option available for operation in a standalone database mode
- User-defined capabilities enable flexible set-up of system parameters and customization
- Maintains extensive history for each device & account
- Device & account look-up's for virtually every data field & data field combination
- Enhanced query routines provide for quasi-report generator functions
- Executes under 32-bit & 64-bit operating systems including Windows Server 2003/2008/XP Pro/Windows 7 Pro

The ALLIANCE™ Backflow Management System (BMS) is flexible software that allows you to manage your cross-connection program — your way. BMS is a simple, yet robust, data management tool that helps save time and money.

BMS puts you in control of backflow prevention and cross connection management. The system keeps thorough inventory records on backflow prevention assemblies while automating many manual, time-consuming tasks and provides various time-sensitive reminders.

Contact us today to find out more on making your backflow and cross connection management a most efficient endeavor.

Manage Your Cross Connection Program

As a water agency, utility company or city automate your cross connection programs with full confidence. Management of your cross-connection control program will be a snap by maintaining thorough records that track customers, their backflow prevention assemblies and compliance to testing and repair mandates.

The compliance tracking is done using our Scheduler feature which makes it easier to send notification letters and follow up letters to customers. It also allows you to include, with each letter, a test report form for each assembly due for testing.

Each test report also includes information about the assembly, such as service address, make, model, size, and location

Let us help you serve your community and customers better than ever. The strategy is clear--choose United Systems' ALLIANCE™ Windows Suite and plan for success. Call 1.800.455.3293 for additional information.

flexible solutions for utilities & local government

Features

General:

User-defined Backflow Device Size
Serial Number, Model Number
Date installed, Installed By
User-defined Manufacturer
Device Location
User-defined Service Type (Hospital, Office building, Restaurant, etc.)
User-defined Hazard type (High, Medium, Low, etc.)
Hazard Date of Last Test
Results of Last Test
Test Frequency – per Device
User-defined Tester (Company, Employee, etc.)

Notices & Reports:

Backflow Device Test List
Test Notices
2nd and 3rd notices for untested devices
Scheduler for automatic generation of Final Notices or Termination Letters, which is based on a frequency in months from the last test date.
Allow multiple schedules (i.e. biannually for High hazards, annually for Medium hazards)
Report or routine to identify the non-compliant customers that have not responded to the Final Notices
Repair Notices (if device fails test, generate a notice to repair letter, other follow up correspondence)
Master Device Test List, Mailing Labels, Tester List

Design

As you look into the future, take comfort in the design of the ALLIANCE™ Windows Suite. Application software and middleware components are building upon a Microsoft.NET development environment. The database considerations are exclusive to Microsoft's robust SQL Server data platform.

This design ensures that your investment in these client-server, enterprise-class applications is well protected.

About Us

United Systems & Software, Inc. (USS) specializes in providing technology to the public sector. Founded in 1977, USS serves over 500 customers throughout the central United States. We are recognized as a Microsoft Certified Partner, Hewlett-Packard Business Partner, Panasonic Toughbook Partner, and Lexmark Printer Partner.

Since 1999, United Systems has also been a distributor for Itron Corporation. We currently represent Itron within a nine state region and specialize in delivering radio-based, mobile & fixed network solutions.
